

## KAYENZI NID SERVICE SYSTEM (KNSS)

Project Title: KAYENZI NID Service System

### Project Summary:

The KAYENZI NID Service System is a web-based platform designed to simplify and speed up the process for individuals who need to update or change their National ID photos. The system specifically serves citizens who face delays and long queues at local sector offices due to high demand for such services.

The platform includes several key features:

Home page with a brief site overview.

Sector information in about sector page including local cells and population data.

NID Service section where users can submit a request form to update their ID photo.

After submission, users wait for admin approval before proceeding .

Additionally, the system includes an Admin Page, accessible through a secure login form. Once logged in, the admin can:

View all incoming requests.

Approve or reject each request based on eligibility or documentation.

If approved, the admin generates a payment route for the user through provided phone number.

This system aims to reduce time consumption and congestion at sector offices by digitizing and organizing the request process.

### Technology Stack:

Front-end: HTML, CSS, JavaScript

Framework: Bootstrap

### Current Status:

The project is under active development, with the front-end implemented. Back-end functionality, including user authentication and request handling, is pending as it is Only front end done.
